THE FIVE GOLDEN RULES

- **Constant temperature**
  The secret to ideal wine storage is a constant temperature. The perfect storage temperature for all types of wine is 12 degrees, minor discrepancies are fine as long as the temperature is constant. If you are interested in storing your wine for a long time, a wine cabinet that can secure a constant temperature is the way to go. If you intend on drinking your wine within 18 months, you should invest in a wine cooler that focuses on achieving the perfect serving temperature - which is a totally separate matter.

- **No vibration**
  Vibration is harmful for wine and should be kept to an absolute minimum. That's why you should go for a wine cooler or cabinet with wooden shelves, as wood absorbs vibration the best. When you choose your wine cooler, make sure that you choose a model with a vibration-free compressor or a model that is fitted with a silencer.

- **No light**
  Wine likes to be kept in the dark! Light speeds up the wine aging process unfavourably, that's why a wine cooler or cabinet always should be equipped with a solid door or a UV protected glass door. If you are looking for a wine cooler with internal lighting, make sure to choose a model with LED lighting.

- **No bad odours**
  Keep your wine collection away from bad odours! Wine corks often deteriorate over time and allow odours to enter the bottle. The best way to make sure that there are no bad smells in your wine cabinet is to choose a model with good ventilation and a carbon filter. Don't forget to change your carbon filter once a year, or else it will be inefficient.

- **Appropriate humidity**
  In order for wine to mature correctly and develop its bouquet to its full potential, it's extremly important that the wine doesn't come into contact with air. Air easily enters a wine bottle if its cork isn't dry. Make sure to avoid damp corks by storing wine at the right humidity level between 50% and 75%. Higher humidity levels than that are likely to damage the labels of your wine bottles - which would be a shame.

5 REASONS WHY YOU SHOULD BUY A WINE COOLER

- **Optimal temperature** - Keeps your wine at the perfect serving or storage temperature.

- **UV protection** - Shields wine from harmful light exposure that can degrade its quality.

- **Vibration-free storage** - Prevents disruptions that could disturb the wine's ageing process.

- **Preservation of flavour** - Maintains consistent conditions to ensure your wine ages and tastes as intended.

- **Elegant display** - Showcases your collection stylishly while keeping it organised and accessible.

WHICH WINE COOLER TO CHOOSE?

Free-standing wine cooler
Free-standing wine coolers are the most flexible type of wine coolers in terms of placement. They don't need to be built into any type of unit and can be placed about anywhere you want. Just make sure to keep 10 cm of free space around your cooler for its ventilation system to work properly.

Built-in wine cooler
Built-in wine coolers are usually installed underneath a kitchen counter. They look their best when fitted to the size of your kitchen cabinets. That's why we offer a wide selection of built-in wine coolers with 15, 30, 40, 50 and 60 cm in width; 700, 720, 780 and 800 mm in door height; and various finishes such as anthracite black, stainless steel or totally custom made according to your colour preferences.

Integrated wine cooler
Integrated wine coolers are the most exclusive looking type of wine cooler as they almost melt into your kitchen design. Integrated wine coolers are placed inside kitchen cabinets and are installed in the same way as built-in ovens. Most integrated wine coolers, nowadays, are front ventilated, which means that the ventilation is placed hidden behind the door and you don't need free space behind, above or below the cooler.

Wine cabinet
If you are interested in storing your wine collection long term, wine cabinets are the way to go. They are just like wine cellars put inside a cabinet and follow the five essential rules of wine storage: constant temperature, no bad smells, no vibration, no light, and an appropriate humidy level.

Serving temperature is a guideline for the ideal range at which wine's aromas and flavours are best expressed. The right temperature enhances the wine's balance and character, contributing to an authentic and enjoyable tasting experience, though preferences may vary depending on the type of wine.

Custom Made

Go for a clean scarlet, crimson or ruby? There are a lot of different shades for every colour. Make sure you have the perfect colour by custom ordering a wine cooler with mQuvée. The only thing we need from you is the colour code for the exact colour you want. We'll take care of the rest!

Read more
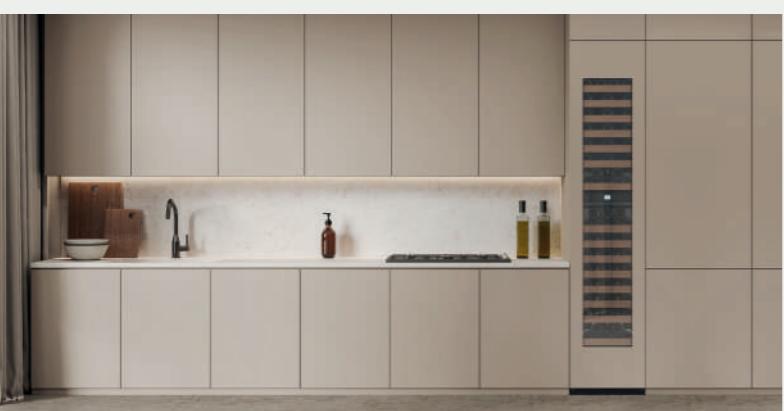

Edge

mQuvée Edge offers sleek wine coolers designed to integrate into any kitchen seamlessly. Featuring luxurious sapele mahogany shelves as well as vacuum-insulated glass doors (VIG technology) for superior temperature control and reduced energy consumption. With a panel-ready design, Edge coolers can be customised to match your kitchen cabinets

Panel Ready

Elevate your kitchen with a Panel Ready wine cooler! With a Panel Ready wine cooler, you can attach your own frame to the door of the wine cooler, allowing you to match both the material and colour of your kitchen cabinet doors. By covering the frame of the wine cooler with a new front, the wine cooler seamlessly blends into your kitchen decor, creating a personalised storage solution that mirrors your unique taste!

BeerServer

Cool your beer with style! BeerServer is mQuvée's collection of beer coolers that can be built in under your kitchen counter. With an identical design to mQuvée's WineCave series, this is the perfect option for those who want to cool beer and wine next to each other.

In order to make wine cooling accessible for all wine enthusiasts WineExpert provide a reliable and convenient storage solution, with pull-out wooden shelves on rails, allowing easy access and organisation of your bottles while complementing your interior style.

Read more

The journey from vineyard to glass is one of artistry, care, and a deep connection to the earth's abundance.

Every exceptional wine experience begins with a winemaker's devotion to balancing nature's hidden treasures with the flourishing vines above - a dedication rooted in craftsmanship, precision, and passion.

With over 20 years of experience, mQuvée brings the same thoughtful care to our wine coolers. Just as winemakers refine their art to perfection, we refine our designs to honour and enhance their creations. To us, a wine cooler is far more than storage - it's a celebration of the winemaker's artistry. Like fine wine, we are committed to preserving what's inside and continually striving to deliver the ultimate wine experience.

"

At mQuvée, we believe in delivering the ultimate wine experience straight to your home—from expertly storing your bottles to the moment you uncork and savor them.

mQuvée

Passion for wine. Wine for passion.
For centuries, European winemakers have poured their heart and soul into selecting grapes, harvesting, and refining their yearly crops to craft the perfect wine. This delicate art, perfected over decades, relies on knowledge passed down through generations.

When a bottle of wine finally leaves the winery, it embodies more than just carefully selected grapes and hard work. It carries hundreds of years of history, heritage, and unrelenting passion.

A single mistake in the production or ageing process can undo years of effort—and, more importantly, waste bottles of fine wine. That is why we kindly ask you to store your wine as it deserves.

Winegrowers specialize in cultivating grapes and crafting wine. At mQuvée, we take pride in offering the best home preservation solutions for your cherished bottles. Our wine cabinets are meticulously designed to replicate the ideal conditions of a wine cellar, ensuring your wine flourishes and ages with dignity.

In other words, when you store your bottles in an mQuvée, you can rest assured that they are protected from temperature fluctuations, vibrations, sunlight, unpleasant odours, and improper humidity levels.
